PROFESSIONAL SUMMARY

Results-oriented Senior Frontend Software Engineer with 6+ years of experience specializing in designing and developing robust, scalable enterprise web applications. Proficient in Next.js, React, and TypeScript, with a proven track record of building high-performance frontend architectures focused on maintainability and exceptional user experience. Expertise spans customer self-service platforms, enterprise operations, financial systems, workflow automation, and government integrations, serving critical business needs for applications with over 18,000 active subscribers. Adept at collaborating with backend teams and integrating REST APIs, Node.js, and CI/CD pipelines (Docker, GitHub Actions) to deliver comprehensive solutions.

SKILLS

- Next.js • React • TypeScript • JavaScript
- React Query • Redux • Zustand • Tailwind CSS
- Ant Design • Node.js • RESTful APIs • Authentication
- Authorization • External Integrations • System Design • Server-Side Rendering (SSR)
- Progressive Web Apps (PWA) • Workflow Automation • Web Push Notifications • PostgreSQL
- MySQL • Docker • GitHub Actions • Frontend Architecture
- Agile Methodologies • UI/UX Design Principles

PROFESSIONAL EXPERIENCE

Frontend Software Engineer Internet Service Provider

Isfahan, Iran | 04/2020 – 03/2026

➤ ISP Customer Self-Service Platform

Designed and developed a customer self-service platform serving 18,000+ active subscribers, enabling digital sales, service management, customer support, and customer engagement within a unified web application.

- Reduced reliance on manual support channels by implementing self-service workflows for purchasing, renewals, and account management.
- Designed a scalable frontend architecture using Next.js, React, and TypeScript with SSR and PWA capabilities.
- Built a Web Push Notification platform with subscription management, delivery tracking, and engagement analytics.
- Improved customer engagement through loyalty programs, surveys, promotional campaigns, and personalized recommendations.

➤ Enterprise Operations & Business Process Automation Platform

Designed and built an enterprise platform that automated operational monitoring, financial compliance, and incident management by transforming fragmented business processes into structured workflows.

- Developed a rule engine to validate operational and financial data against organizational policies and automatically detect inconsistencies.
- Implemented reconciliation workflows between internal financial records and banking transactions, generating operational cases for investigation.
- Built an internal operations application supporting service provisioning, fault management, field activities, operational forms, and team collaboration.
- Improved cross-department visibility and issue traceability through centralized dashboards and workflow automation.

➤ **Financial Transaction Processing & Tax Integration Platform**

Designed and implemented a financial transaction platform that automated tax reporting to Iran's National Tax System while ensuring reliable end-to-end transaction tracking.

- Built the complete integration layer based on official tax system specifications, including APIs, schedulers, and monitoring services.
- Implemented lifecycle tracking for every submitted transaction using unique tracking identifiers.
- Developed automated error detection, reporting, retry, and recovery workflows for failed or pending transactions.
- Increased operational visibility through dashboards for monitoring transaction status and processing reliability.

➤ **Greenhouse Business Management Platform**

Led the end-to-end design and development of a custom business management platform that centralized daily operations into a unified digital solution.

- Integrated sales, inventory, finance, customer management, logistics, and reporting into a single platform.
- Replaced fragmented manual workflows with automated business processes and centralized data management.
- Designed the system architecture, relational database, and core application modules from requirements through deployment.
- Delivered management dashboards and reporting tools that improved operational visibility and decision-making.
